

# **WARNING**

**On June 16, 2022**, a 19-acre portion of Great Meadow Stream in Great Pond (see attached map) will be treated with herbicide to control the growth of variable water-milfoil (*Myriophyllum heterophyllum*), an invasive aquatic plant

**Herbicide Applied:** florpyrauxifen-benzyl (Trade name: ProcellaCOR™ EC)  
**Certified Applicator:** SOLitude Lake Management®  
590 Lake Street, Shrewsbury, MA 01545, tel. (508) 865-1000

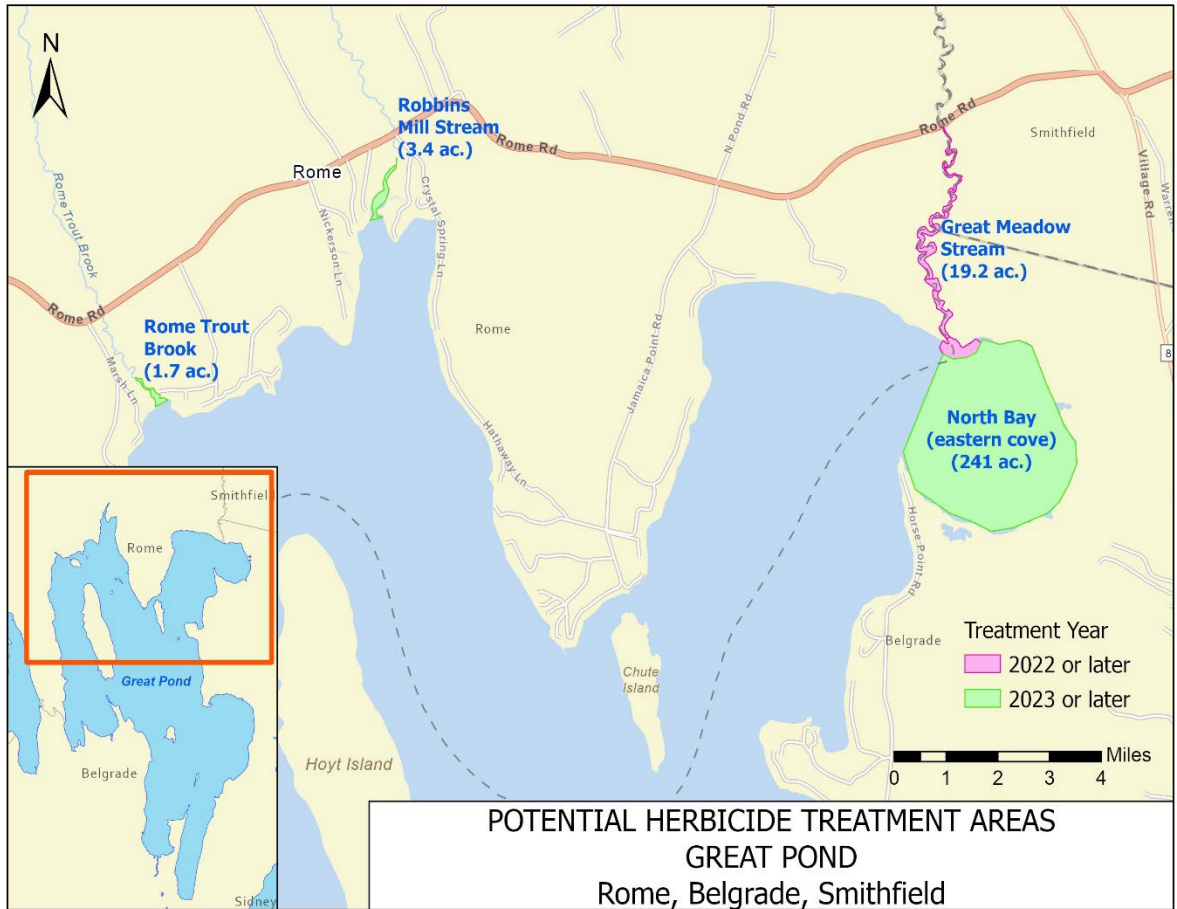

The following water use restrictions on the ProcellaCOR™ EC label apply to the treatment area:

- Do not use lake water for hydroponic, greenhouse or nursery irrigation before contacting Maine Department of Environmental Protection (DEP, see contact information below) to confirm the herbicide has dissipated
- Do not use lake water for any residential or non-agricultural irrigation (such as shoreline property use for irrigation of residential landscape plants and homeowner gardens, golf course irrigation, and non-residential property irrigation around business or industrial properties) for 3 days following treatment. Turf may be irrigated immediately after the treatment

There is no label restriction on recreational uses, including swimming, but Maine DEP respectfully requests you avoid swimming and boating in the treatment area on June 16, 2022 as an added safety precaution.

**FOR FURTHER INFORMATION CONTACT:**

John McPhedran, Biologist  
Maine Department of Environmental Protection  
(207) 215-9863; john.mcphedran@maine.gov

The above image shows the northern portion of Great Pond. The area to receive herbicide treatment in 2022 is only the pink area on this map: Great Meadow Stream from Rte 225 southward to where the stream enters Great Pond.
